## LIGHTING IN INDUSTRY

Waldmann Lichttechnik is the leading manufacturer of workplace lighting worldwide. The comprehensive production programme ranges from complex lighting systems with integrated light management through tasklights for all branches of industry and all areas of application to

special and inspection lights for laboratories, production lines and quality assurance. Over 200 standard models and more than 2000 special solutions are available. This product variety combined with the know-how and competence of the Waldmann lighting

specialists guarantees the right light at the workplace. Further information is also available on professional lighting solutions for the fields of architecture, offices and medicine.

Further information on the comprehensive product range is available at [www.waldmann.com](http://www.waldmann.com)

Head office address:  
Peter-Henlein-Straße 5  
D-78056 Villingen-Schwenningen

Good work and good visibility are inextricably linked in most occupations. Light at the workplace thus requires special consideration.

Poor visual conditions can impair a person's entire well being. Marked increases in so-called asthenopic complaints such as general unwellness, headache, irritated eyes and other diverse symptoms are the result. This has particularly critical effects at the workplace.

Waldmann luminaires are developed and produced in accordance with the relevant European standards. Most models bear the VDE symbol (Association of German Engineers). For the US market, Waldmann Lichttechnik offers a separate product line featuring UL-approved tasklights and machine luminaires.

We will be pleased to provide you with more detailed information on request.

Waldmann lighting consultants are specialists offering competent and comprehensive advice on all matters relating to light at the workplace and for machines. The professional lighting of machine tools has been an area of specialisation for some decades now.

Renowned manufacturers at both national and international level work hand-in-hand with Waldmann Lichttechnik. The lighting requirements are defined right from the early planning phases when developing new machines, on

the basis of the relevant standards and the specific requirements of the application concerned.

Waldmann's comprehensive range of luminaires, graduated according to models, supply voltages and power ratings, offers appropriate models to cover virtually every type of application. The programme is also subject to ongoing expansion, continually incorporating new products featuring the latest innovations in the field of lighting technology.

## THE RIGHT LIGHT.

... for all industrial workplaces

Having served renowned international companies and most of the leading machine tool manufacturers as long-established customers for many decades, we are well aware of the growing requirements of globally oriented markets.

Waldmann customers trust in the high quality of our products & services.

Competence & inspiration are key driving forces behind the new developments & solutions. The prime consideration for all our activities is the scope of requirements which applies directly at the place of use, at the workplace. There is a large diversity of working requirements in every workplaces, there cannot be a single correct type of lighting to cover all

eventualities. The specific characteristics of the task involved provide the parameters for the ideal working light. These are reflected in the choice of light elements and the functionally oriented designs. Another important point concerns economic aspects, such as energy requirements.

## ROBUST AND WATERPROOF.

### Protection system IP 67

Machines, and machine tools in particular, are a classic example of workplaces which cannot be illuminated satisfactorily by ambient lighting. The light is often required inside the machining area. Conventional luminaires are unable to provide the necessary functions for machine lighting purposes.

Splashing water and mechanical stress resulting from chips or other metal pieces which are released by the production process in the enclosed interior of the machine call for a robust luminaire design corresponding to protection system IP 67.

It is important that the necessary visual tasks can be performed without any restrictions.

Typical visual tasks include:

- Clamping and positioning a workpiece on a lathe.
- Observing the cutting process on a milling machine.
- Checking scales and displays.

## HIGHLIGHTS

- Robust design.
- Waterproof in protection system IP 67.
- Diverse model variants.
- State-of-the-art energy-saving technology combined with high luminous power.  
Also with T5 lamp technology and electronic ballasts.
- Absolutely glare-free\* model variants.

\* In accordance with the national and international regulations on occupational safety (EN 1837).

## THE RIGHT LIGHT FOR EVERY REQUIREMENT.

Over 2,000 special designs

Protected luminaires for machines of the RL 70 series in protection system IP 67 are ideal for use in machine tools and machining centres. Suitable special luminaires are available for every conceivable area of application. A good solution will normally be found in the shortest of time.

Should there be no luminaire from our large standard programme that fits the bill one hundred per cent, hundreds of special designs are additionally available.

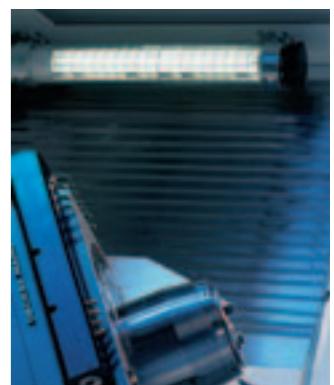

Whatever your requirements, it's always worth talking to your Waldmann lighting consultant.

Complete product range with technical data beginning on page 78

Luminaire configurations are to be found for every type of machine and for every conceivable application. Apart from the comprehensive standard programme, hundreds of special designs are also available.

Protected luminaires for machines of the RL 70 series are ideal for use in machine tools and machining centres.

The correct lighting is designed in accordance with the precise requirements of the production process.

## HIGH QUALITY DOWN TO THE LAST DETAIL.

### Professional features

The light quality in demanding areas of application such as the interiors of machines is directly dependent on the quality of the luminaire. A functional, well-conceived design needs to be backed up by an appropriate choice of materials and careful workmanship. Durability and reliability even in a tough production environment are the result of an uncompromising commitment to perfection.

Protective-tube luminaires from Waldmann offer a winning combination of:

- resistance to chemicals
- lasting protection from coolants and lubricants
- glass fibre-reinforced polyamide
- conical screw-on connector
- bayonet socket
- protection system IP 67

Depending on the area of application, the tube is available in clear acrylic or particularly tough borosilicate glass. Waldmann light quality in accordance with the precise requirements of the given application, guarantees perfect lighting at and in machinery - as demonstrated by the successful use of our products throughout the world. The RL series featuring cutting-edge T16 lamp technology deserves special mention.

*A simple twist is all it takes. The new bayonet socket saves time and money. Lamp changing is so simple that it can be carried out directly by the machine operator.*

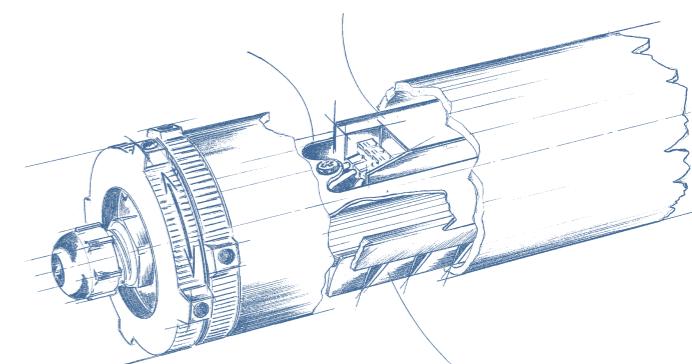

*The AWDE model with electronic ballast is ideal in the confined interiors of machines. Small, compact but powerful. Single-sided attachment. With or without anti-glare fitting (aluminised parabolic louvre).*

*Absolutely glare-free\*  
Aluminised parabolic louvres focus the light on the work area. Direct glare and reflections are eliminated.*

\* In accordance with national and international occupational safety regulations (EN 1837).

*Ballast positioned behind the lighting element (piggyback arrangement)*

## SPOT ON.

### Protection system IP 65

When a powerful spot light is required on machinery, Waldmann halogen luminaires are the perfect solution. The HSW 20 and HSW 75 luminaire series offer concentrated light power and a whole range of useful additional features to make the work process simpler, faster and

more cost-effective. The ingenious anti-glare fitting is a case in point. A special louvre in the luminaire head prevents disturbing direct glare. The risk of glare is particularly severe with strong halogen light, and should be eliminated as far as possible.

Complete product range with technical data beginning on page 94

## CONCENTRATED HALOGEN LIGHT.

For all manner of applications

The models of the HSW 20 series of halogen luminaires are supplied in protection system IP 65.

High-quality materials and a robust design guarantee absolute reliability and a long service life.

The luminaire head is lined with a special plastic and a self-cooling heat-protection coat. The double glass cover serves to reduce the external temperature, thereby preventing coolants and lubricants from burning dry. Ergonomic switch for single-handed operation.

## HIGHLIGHTS

- Strong spot light.  
Lamps with flood or spot characteristic.
- Attractive design.  
Ergonomically shaped switch.
- Waterproof in protection system IP 65.
- Built-in louvre to prevent direct glare.
- Swivel range 360° / 320° (built-in luminaire).
- Simple changing procedure for lighting element.
- Double glass design to prevent coolants from burning dry.
- Self-cooling heat-protection coat.

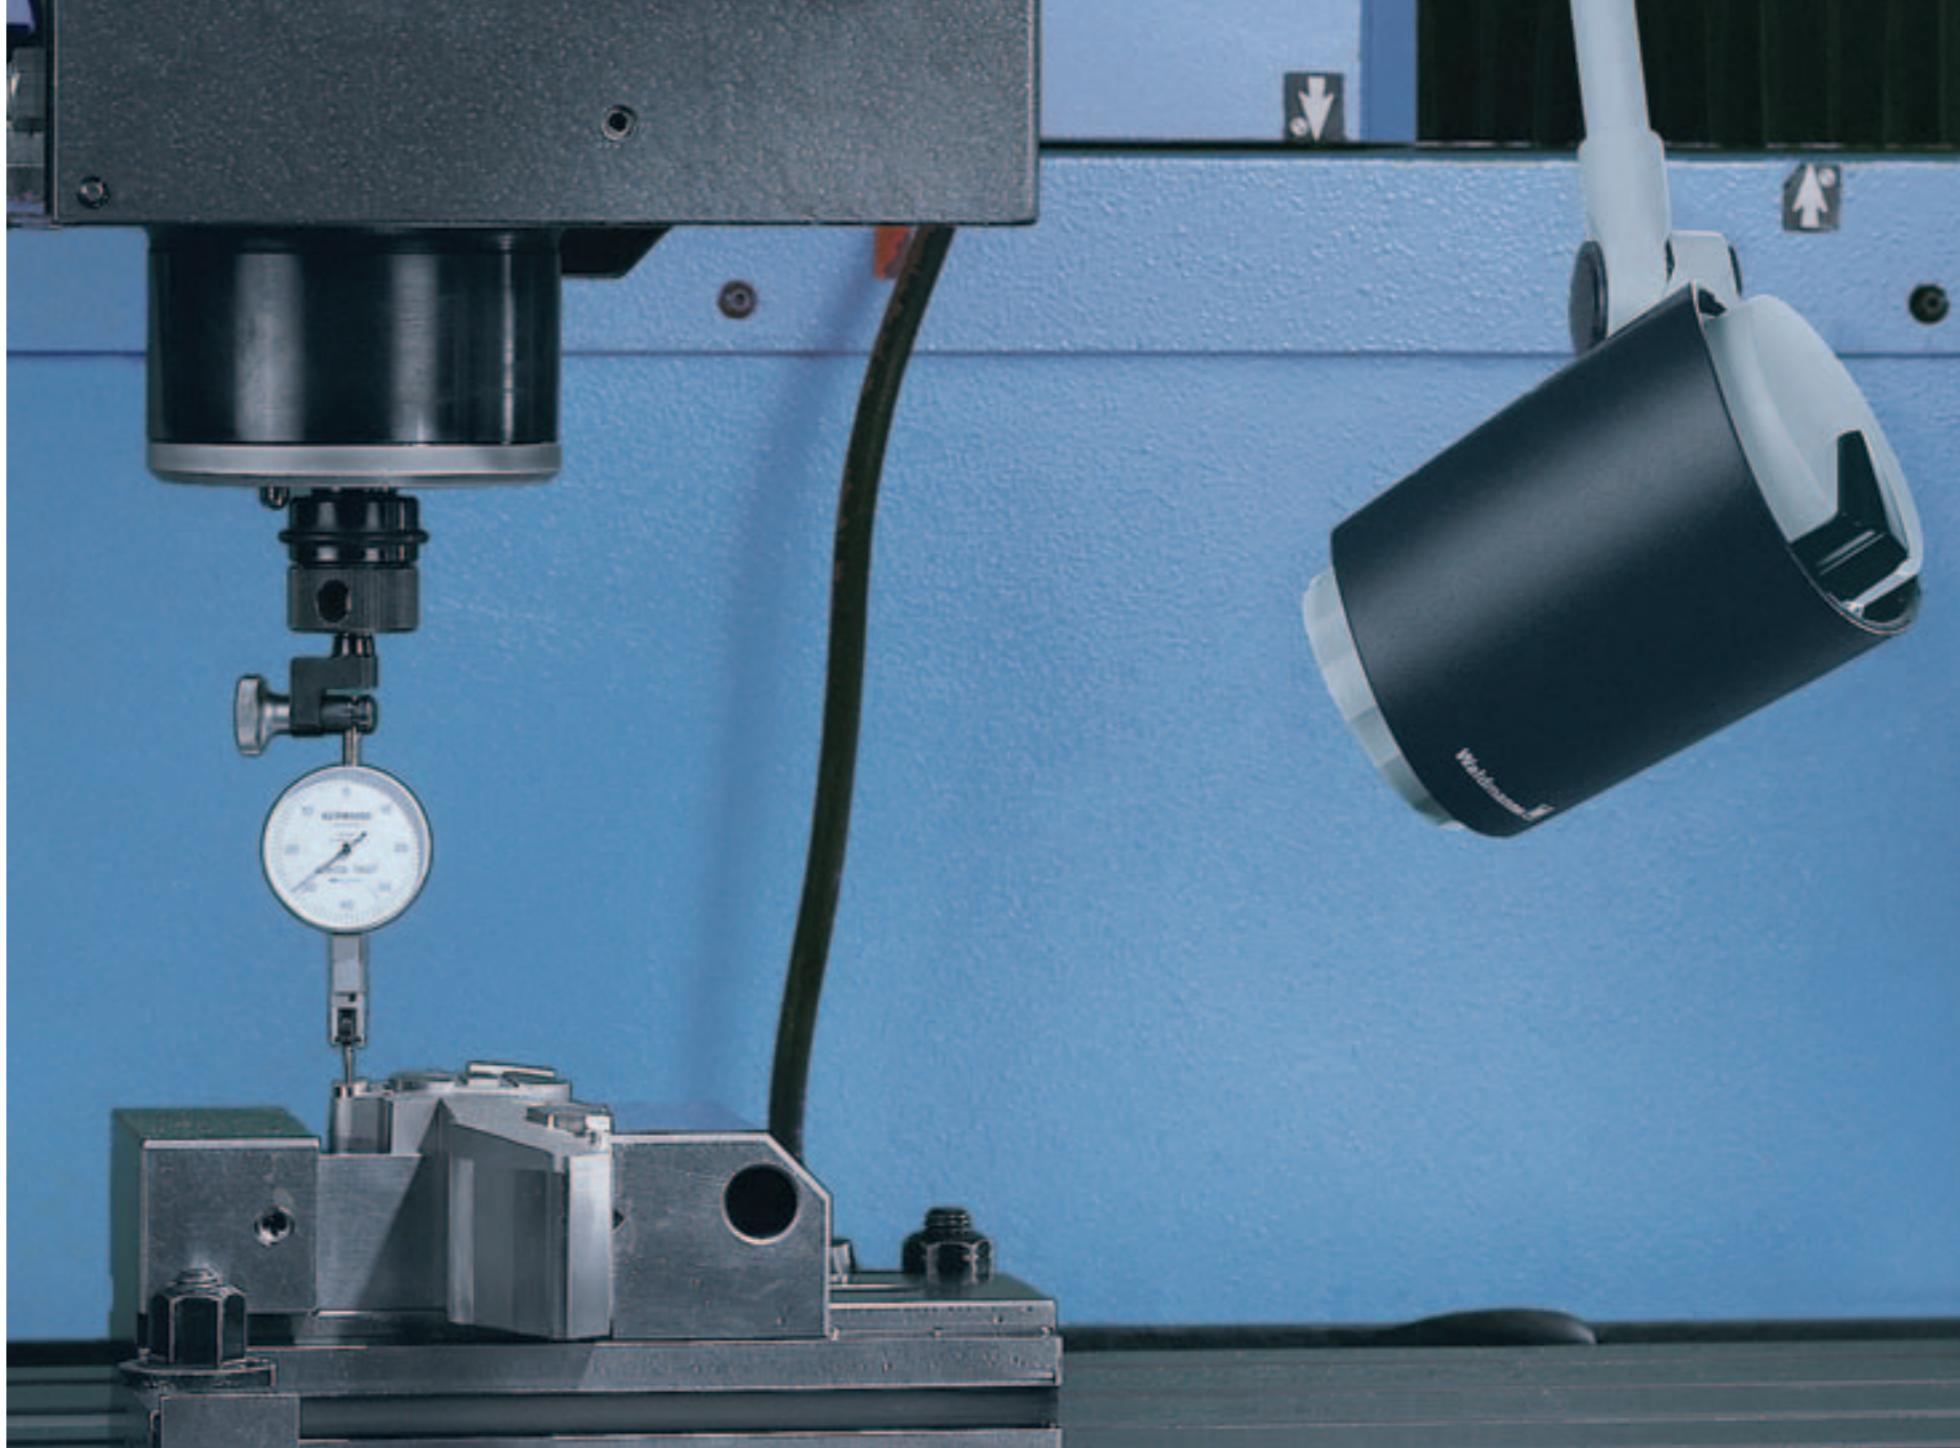

Industrie  
Forum  
Design  
Hannover

*Glare-free\* thanks to built-in louvre.*

\* In accordance with national and international occupational safety regulations. (EN 1837).

*Adjusting the luminaire is simplicity itself. The light is always positioned precisely as required.*

*HSW 20 halogen luminaire with arm, offering a large radius of action.  
Suitable for all manner of applications*

*Also available as a built-in luminaire.*

## HALOGEN POWER.

Protection system IP 65

The HSW 75 halogen luminaire in protection system IP 65 provides light just where it's needed with pinpoint accuracy. Absolutely glare-free\* and user-friendly, it offers state-of-the-art, functional and convenient lighting on machines.

The 75 watt halogen power light can be positioned easily and precisely with one hand. A further advantage is the flexible arm, which leaves sufficient room for manoeuvre, even in confined machine interiors.

\* In accordance with national and international occupational safety regulations (EN 1837).

## TOP PERFORMANCE. GLARE-FREE.

A shining example

Optimised light dynamics offer enhanced safety and reduce the strain on the eyes during setting-up operations, and during checking and inspection in particular. Good vision is of crucial importance during the production process.

Consequently, apart from illuminating the work area with

sufficient light, the luminaire head should also be easily adjustable, without any need for complicated or time-consuming operations. Lighting convenience coupled with a well-conceived design and easy handling are the outstanding advantages of the HSW 75 halogen luminaire from Waldmann.

*Adjustment is simplicity itself. The light is always positioned with pinpoint accuracy.*

## HIGHLIGHTS

- 75 watts of intense spot light.
- Transformer integrated into the handle (230 V version).
- Bayonet socket for swift lamp changing.
- Glare-free\* thanks to the metal louvre in the luminaire head.
- Protection system IP 65.

\* In accordance with national and international occupational safety regulations (EN 1837).

*HSW 75 halogen luminaire with arm, offering a large radius of action. Suitable for all manner of applications.*

*Also available as a built-in luminaire.*

## PERFECTLY CONCEIVED DOWN TO THE MINUTEST DETAIL.

### User-friendly lighting quality

Extreme requirements call for a high level of expertise. With this in mind, the special conditions relating to use in machine environments have been taken into consideration down to the minutest detail in designing the HSW 75 Waldmann halogen luminaire. Apart from the vast luminous power, the design engineers

have also accorded special importance to user-friendliness. These additional assets often have a decisive influence on the lighting quality as a whole. Technology, functionality, ergonomics and design are all part of a holistic concept for perfect lighting technology at the machine workplace.

Ergonomic on/off switch for single-handed operation during setting-up.

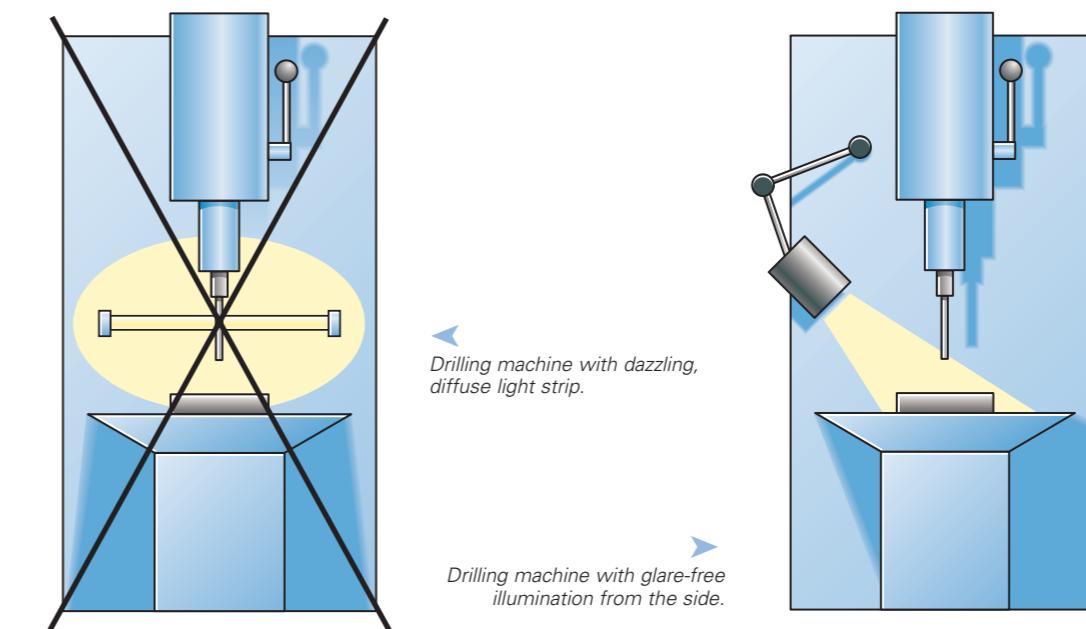

No costly down times: The innovative bayonet socket makes changing the lamp a swift and simple matter.

Absolutely glare-free\* light thanks to the metal louvre in the luminaire head.

\* In accordance with national and international occupational safety regulations (EN 1837).

An overview of the complete product range with technical data begins on page 100

## POWERFUL LIGHTING FOR LARGE-AREA ILLUMINATION.

Protection system IP 54 · IP 67

In many areas of industrial manufacturing, surfaces require to be illuminated uniformly. Special cold-light luminaires fitted with fluorescent lamps which are available with articulated arms or as built-in variants are ideal for this purpose. Many cold-light luminaires belie the apparent contradiction of offering versatility com-

bined with suitability for special tasks.  
The luminaires may be fitted with one or more lamps.  
An important aspect is glare protection.  
Special louvres which are integrated into the luminaire head have proven the most effective solution here.

## LARGE-AREA ILLUMINATION.

Protection system IP 54

Waldmann machine luminaires in waterproof design provide large-area illumination at the workplace. The robust die-cast luminaire heads have no problems coping with the rough conditions which prevail on the shop floor. This means that chips, coolants and dust have no detrimental

effects on the luminous power, correct functioning or durability of the luminaires. As high-lustre materials such as metals are frequently handled at industrial work-places, the arms and joints are designed to facilitate alignment of the luminaire head.

*Large-area illumination in line with machine requirements with model WD 211.*

## HIGHLIGHTS

- Waterproof in protection system IP 54.
- Robust design.
- Individually, flexible and adjustable.  
Large radius of action.
- High-quality materials.
- Long service life.

*Built-in luminaire EBL 211 with 2 x 11 W energy saving lamps. The two compact fluorescent lamps emit only minimal heat and are protected by a plastic cover.*

## CONCENTRATED HALOGEN LIGHT.

Protection system IP 20

When the brightest possible concentrated light is required rather than large-area illumination, the halogen luminaires of the 20 series fit the bill perfectly. Over 20 model variants are available. The individual configurations differ in terms of supply voltage (230 V alternating voltage or 12 or

24 V safety extra-low voltage), design, mounting, the glass screen (clear or matt for concentrated or gently diffused light) and switches (ON/OFF rocker switch), step less adjustable dimmer, synchronisation with machinery, for example.

## HIGHLIGHTS

- All-purpose luminaire.
- Numerous model variants.
- Individually, flexible and adjustable.
- Light concept tried and tested worldwide.
- High-quality materials.
- Long service life.
- Special accessories available (clip-on magnifier, light projector, fibre optic tube).

## A LUMINAIRE RANGE OFFERING GREAT VARIETY.

Protection system IP 20

Apart from deployment in predominantly small-scale machines, the diverse models with arms and built-in variants of the HP 20 halogen luminaire are also ideal for assembly or inspection work. Typical areas of use are on sewing machines and other textile equipment, on engraving, grinding and milling machines and on electrical discharge machines.

Outside of industry, they are also used in medical areas and laboratories. 20 W halogen luminaires are able to achieve illuminance levels of over 8,000 lux in the centre of the light cone at a measurement distance of 500 mm. The concentrated light is generated by 12 or 24 V halogen lamps.

Diverse model variants to cover every type of application. Model HPT 20 with an extremely flexible metal support.

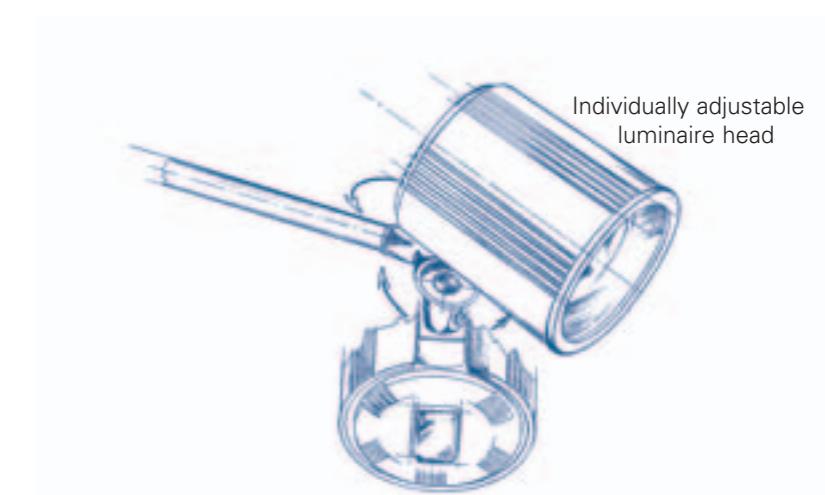

The practical table version. Halogen luminaire HPH 20 with magnetic base.

Halogen head lamp HPK 20 for fixed installation. Also available with magnetic base.

Complete product range with technical data beginning on page 106

Individually adjustable luminaire head

## THE FUTURE HAS ALREADY BEGUN.

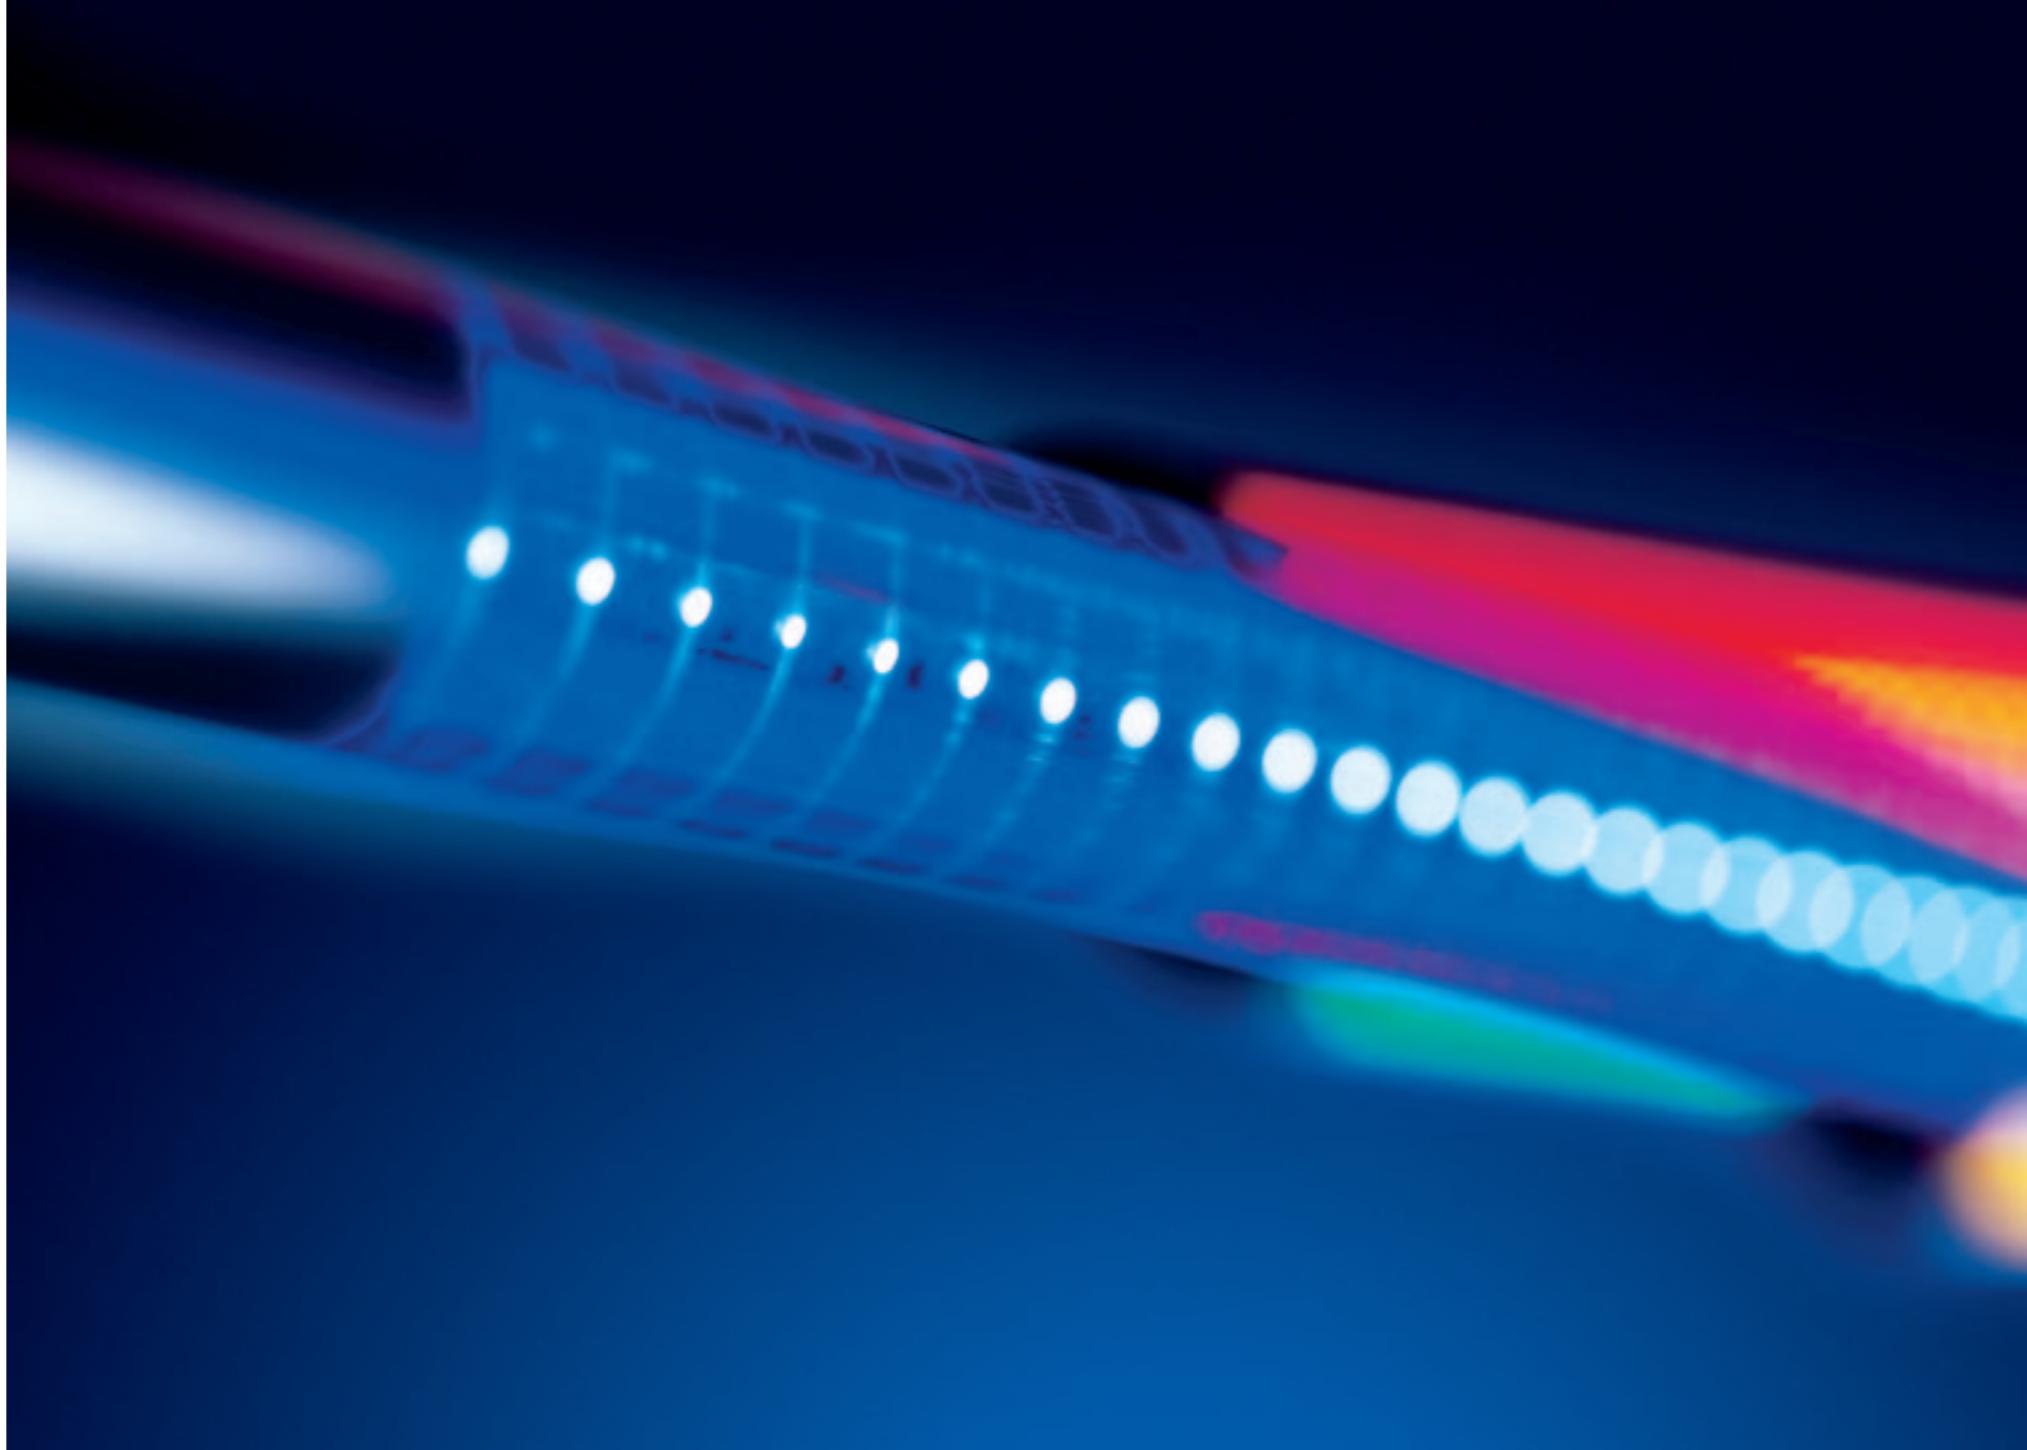

### Innovative lighting concepts

The LED (light emitting diode) is revolutionising the world of light with its compact dimensions and crucial technological advantages. This new form of lighting technology is already in use in many lighting applications. The reasons for its success are plain to see: LEDs offer numerous advantages over conventional light

elements with regard to visual effects, economy and reliability. The long service lives of these luminaires and their stability when exposed to vibrations, coolants and extreme temperatures make them an ideal choice for use in machinery and in the area of industrial production processes.

### HIGHLIGHTS

- Extremely long service life (up to 50,000 h).
- Low maintenance requirements.
- UV- and infrared-free light.
- Immediate (re-)starting. No flickering.
- Highly shock-proof.
- No stroboscopic effect.
- Able to run on safety extra-low voltage.
- Silent operation and minimal heat output.
- All colour temperatures possible.

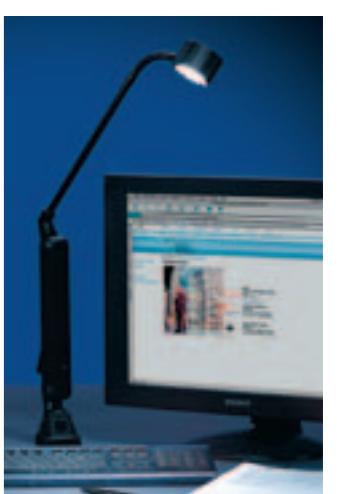

*Attractive, new luminaire configurations for innovative LED lighting applications.*

*Waldmann Lichttechnik offers various LED modules for innovative lighting solutions.*

*Lighting configurations fitted with various LEDs according to the requirements of the individual application.*

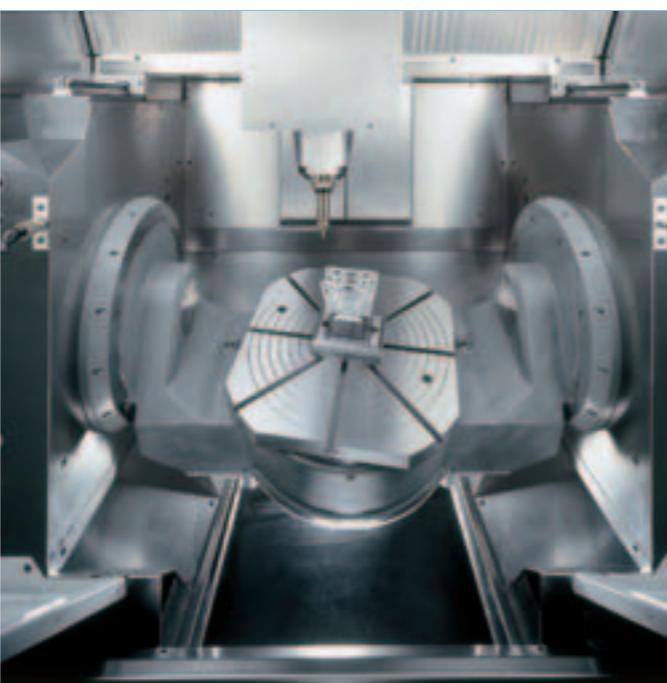

*Also available as a dimmable luminaire with arm. See page 126.*

## BACKGROUND INFORMATION ON THE SUBJECT OF MACHINE LIGHTING.

### Professional know-how

Depending on the type of production process and the deployed machinery, integrated machine luminaires may be necessary both on and inside machines. The employed lighting systems are required to perform specific visual tasks. These relate to operations such as setting up and resetting machines and monitoring the production process,

all of which need to be carried out with maximum effectiveness. This calls for a high level of visual comfort as well as compliance with specified safety standards, in order to ensure efficient, problem-free operations. The relevant standard stipulates the parameters for integrated lighting in detail.

*Interior of machine requiring illumination.*

### **Stipulations in accordance with the relevant German industrial standards (DIN)**

Manufacturers of machines with integrated lighting are required:

- to measure the illuminance and to verify the uniformity of illuminance.
- to check by visual means whether the glare protection is satisfactory.
- to draw up a test report on the lighting system.
- to supply instructions for testing and maintenance.

### **Glare**

With regard to direct glare, which can result from inadequately screened luminaires, for example, a distinction is made between physiological glare, which measurably reduces visual performance, and psychological glare. The latter leads to tiredness, a lack of concentration and a subsequent deterioration in performance. Both direct and reflected glare can be avoided by using individually adjustable luminaires with special screens and parabolic louvres.

### **Illuminance**

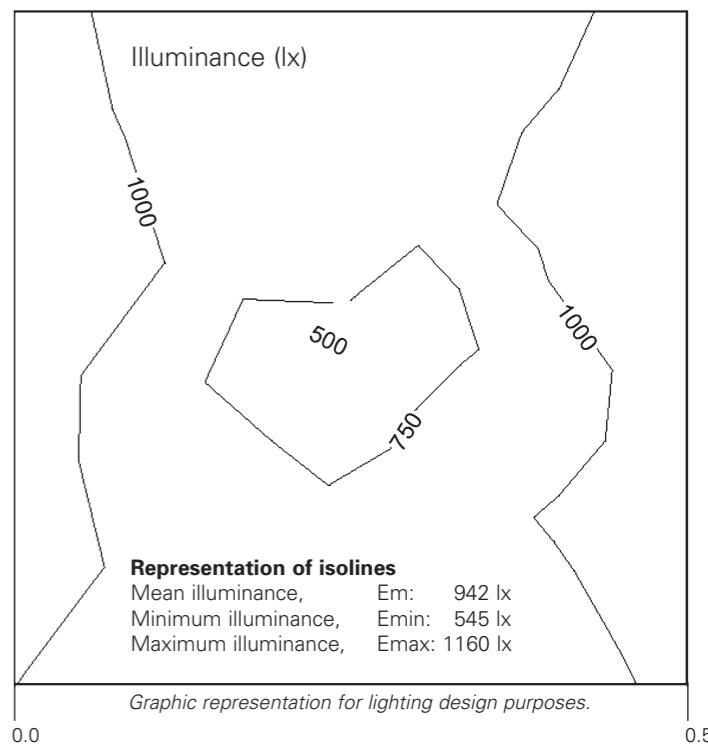

Illuminance is a quality criterion for the correct light. It depends on the specific visual task concerned which parameters are required in which order of priority and in which strengths. In addition to fixed lux values which are defined for certain areas of work, other criteria such as the uniformity of the light may also be of crucial importance. This uniformity is determined as the quotient of minimum and mean illuminance or as the quotient of minimum and maximum illuminance.

### **Lighting design**

Waldmann's lighting designers work with RELUX lighting design software. This system enables polygonal room shapes and complex room elements to be generated with absolute authenticity. To enable verification of compliance with international standards, visual representations are carried out (3D, isolux lines or false colour representations) and the correct technical data for the lighting are calculated. The simulations and analyses carried out in the RELUX system supplement actual measurements.

*Virtual illumination of the machine's interior.*

## HOMOGENEOUS AREA LIGHT.

Absolutely glare-free\*

Waldmann universal luminaires are not just suitable for deployment in specific, precisely defined areas. Rather, they are used at various types of workplace which, while diverse in character, are nevertheless subject to similar visual requirements. The scope covers shop floors, warehouses, machines, laboratories, technical offices, assembly workstations, control centres and inspection stations,

for example. For all this diversity, typical quality characteristics such as glare-free light offering wide coverage and above all easy adjustment are also important criteria for all universal luminaires.

Highly flexible movement and adjustment and absolutely glare-free illumination\* are unique product merits of the Waldmann universal luminaires.

\* In accordance with the national and international regulations on occupational safety (EN 1837).

## FROM THE LABORATORY TO THE INDUSTRIAL WORKBENCH.

Robust and flexible

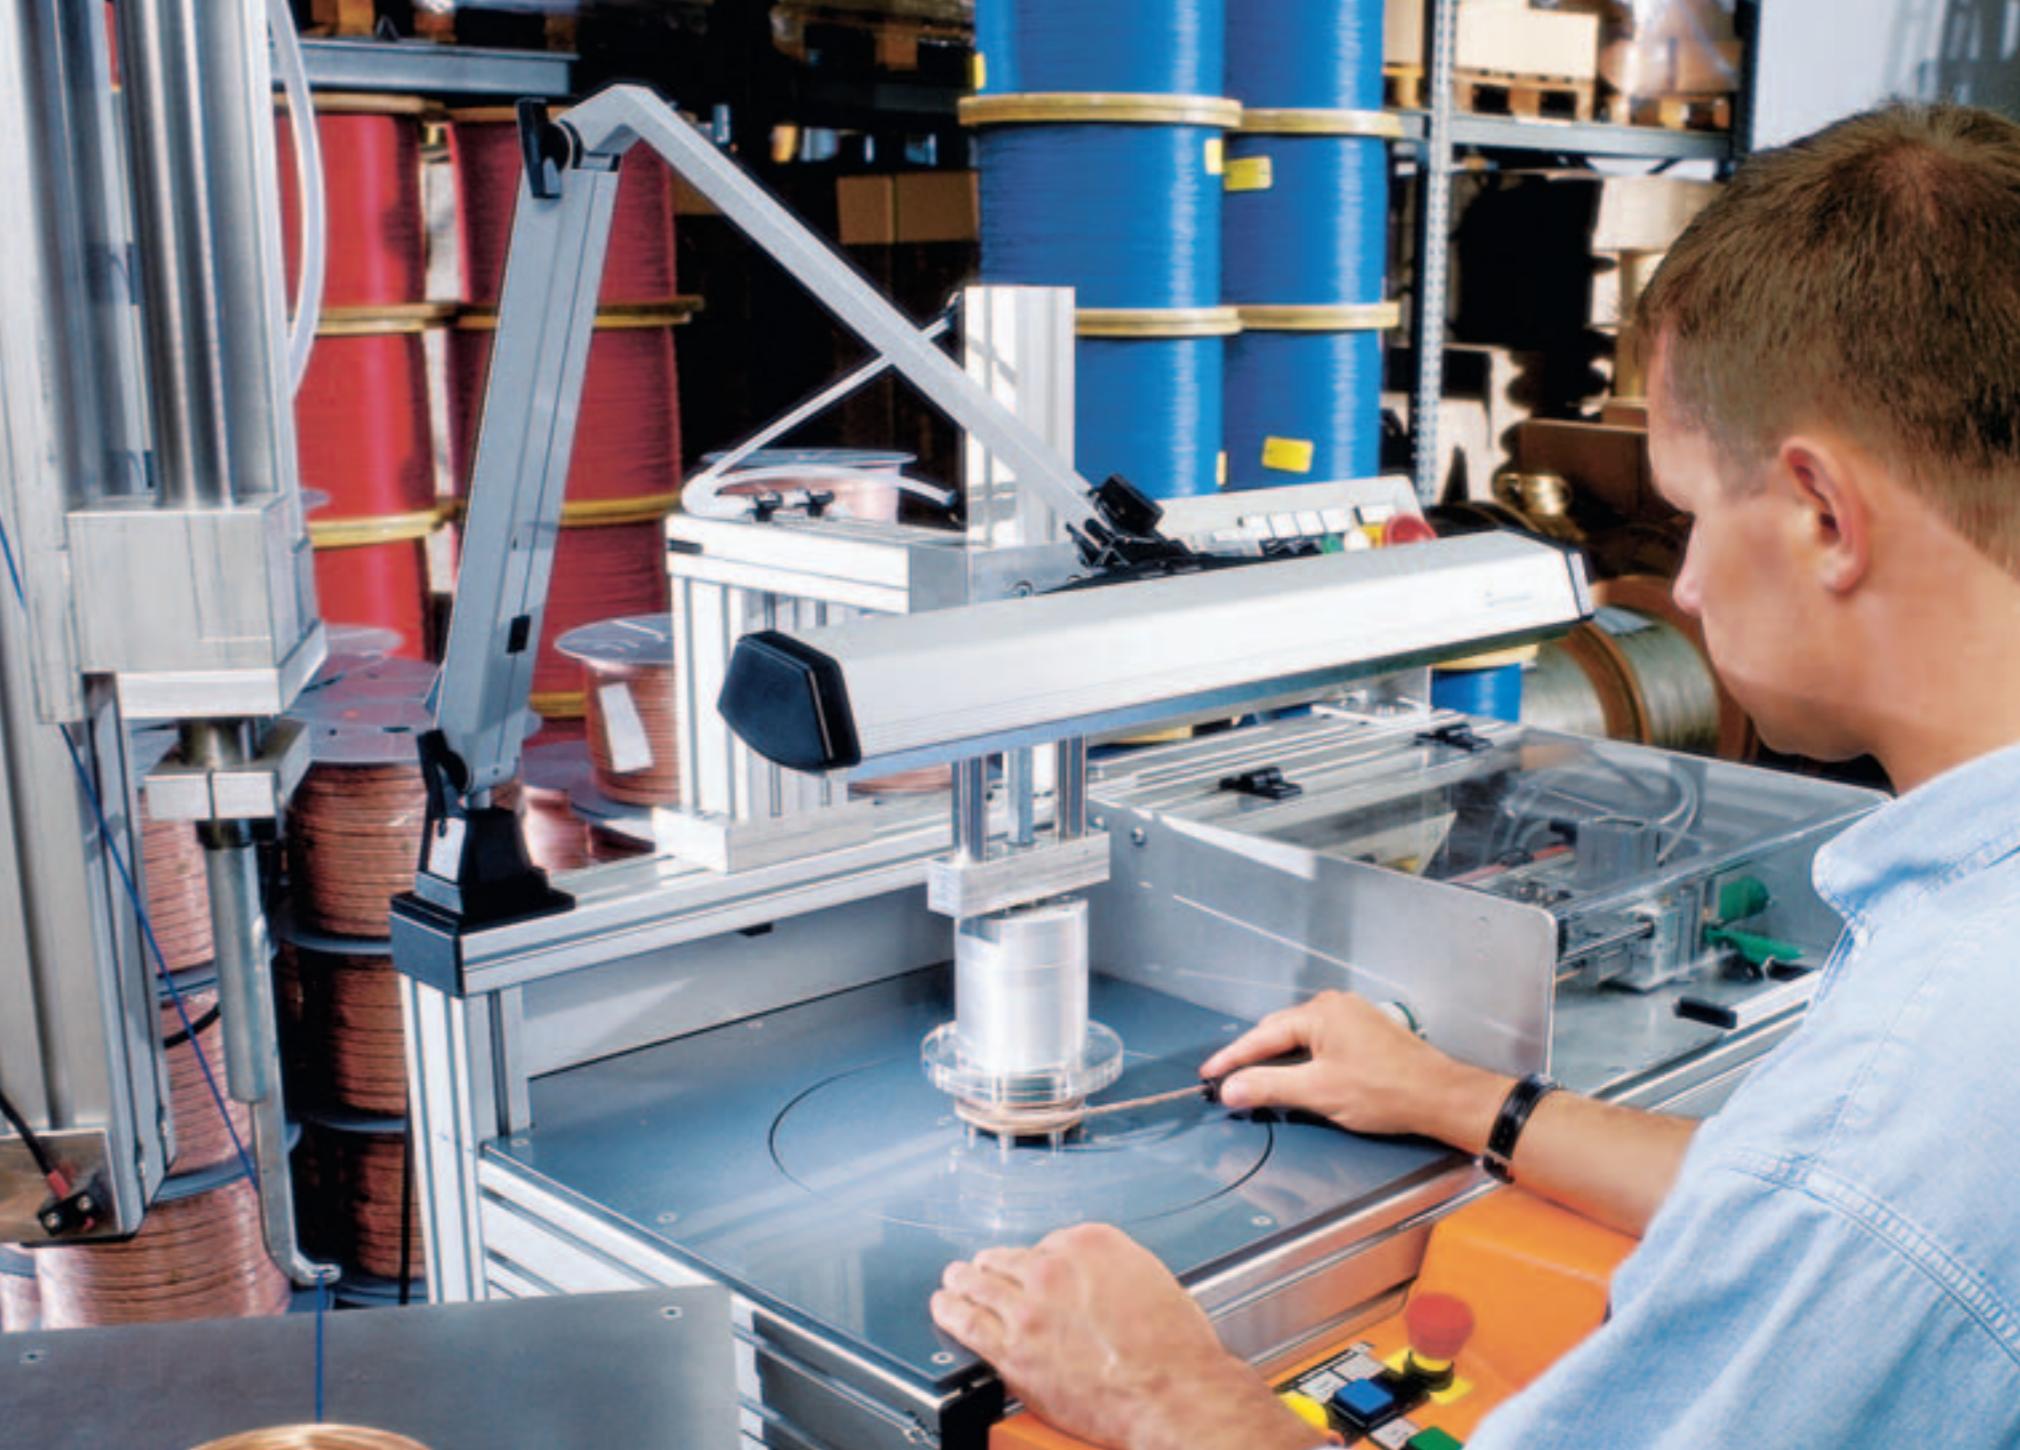

Many workplaces in industry require large-area illumination. This makes luminaire models STE 124 and STE 136 the right choice for many areas of production, testing and inspection.

Apart from the light characteristics, users also appreciate the quality of materials and workmanship and the ergonomics and user-friendliness of these luminaires.

## HIGHLIGHTS

- The ultimate in versatility.
- Absolutely glare-free.\*
- Robust metal construction.
- Easily adjustable to individual requirements.
- State-of-the-art energy-saving technology combined with high luminous power.
- Available with electronic ballast.
- 3-diopter magnifier available as accessory.

\* In accordance with the national and international regulations on occupational safety (EN 1837).

*Robust and flexible. Model STE 136 illuminates the work area in line with ergonomic requirements.*

*No problems with direct glare, precision-adjustable light cone (3D head joint).*

*For special workplaces, the luminaires are also available with asymmetric head attachment.*

## THE UTMOST IN VERSATILITY.

Professional lighting technology

Waldmann universal luminaires are in use at millions of workplaces throughout the world. Models SNE 118 and SNE 136 are always the right choice when it comes to illuminating workplaces in commerce and industry.

From the shop floor to the engineering office, from the jeweller's to the electronics laboratory, the right light in line with ergonomic requirements and easy positioning of the luminaire head are two key merits which stand out from a host of other advantages.

### HIGHLIGHTS

- The ultimate in versatility.
- Absolutely glare-free.\*
- Easily adjustable to individual requirements.
- State-of-the-art energy-saving technology combined with high luminous power.
- Available with electronic ballast.
- 3-diopter magnifier available as accessory.

\* In accordance with the national and international regulations on occupational safety (EN 1837).

## ERGONOMIC LIGHTING TECHNOLOGY.

### Intelligent user-friendly lighting

Structural design is of particular importance to this type of luminaire. As high-lustre materials such as metals are frequently handled at industrial workplaces, the arms and joints require to be designed so as to facilitate alignment of the luminaire head, ideally with one hand.

Troublesome reflections from the surfaces of machinery or materials can then be eradicated by adjusting the light direction. Spring-balanced friction joints

which enable adjustment without opening the tommy screws are crucial here. Features such as ball-joint bases, ball-joint heads and 3D articulated heads enable a large radius of action and optimum positioning of the luminaire head. All luminaires come with a choice of mounting options to cover the different requirements at the workplace. Wherever possible, the base of the luminaire is

secured to the edge of the desk or workbench by means of four screws or a clamp. Where this is not possible, alternative mounting options are available.

*State-of-the-art lighting technology with high-power energy-saving lamps.  
Ergonomic, functional design and features.  
3 diopter 160 x 105 mm large-field glass magnifier available as an accessory.*

*Integrated absolutely glare-free\* special louvre.*

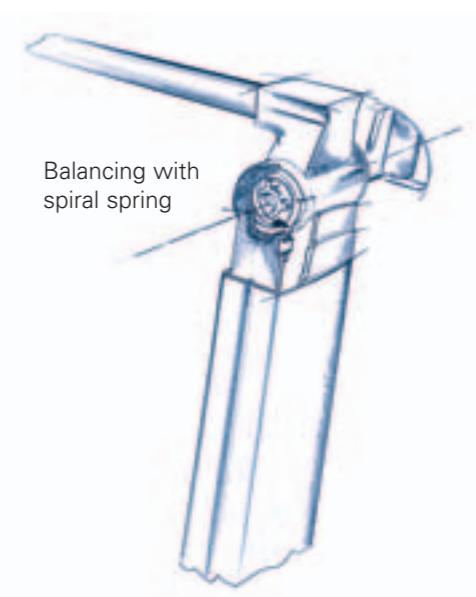

*Spring-balanced friction joints with ergonomically designed tommy screws provide for easy adjustment. The luminaire head can be positioned with one hand. When the friction is set correctly, the tommy screws do not require readjusting.*

\* In accordance with national and international occupational safety regulations (EN 1837).

Complete product range with technical data beginning on page 110/118

## A SYSTEMATIC APPROACH TO LIGHTING.

### Modular design

Compact industrially manufactured assembly workstations incorporate the latest findings from the field of ergonomics. The geometry of the overall construction, the design and arrangement of the handling components and auxiliary equipment and, not least of all, the lighting have a direct influence on the posture of the personnel manning the stations. This complex combination of different factors ultimately has a sustained effect on the subjective sense of well-being and on productivity.

Luminaires which are installed at standardised assembly workstations must offer quality characteristics which comply with the requirements of the relevant standard (DIN 5035 T2) as well as taking the physiological aspects into consideration. In order to work in an efficient manner without tiring, personnel require luminaires which are designed and arranged to ensure absolutely glare-free conditions. Uniform illumination of the work area is another important factor.

Complete product range  
with technical data beginning  
on page 128

## VARIABLE AND GLARE-FREE.

A practical lighting concept

System workstations require special lighting. We have collaborated with leading manufacturers of system workstations to develop special luminaires which meet the full scope of visual requirements. A defining feature is the modular design. The luminaire models can be deployed on their own or in combination, according to the type and structure of the workplace.

Compact fluorescent lamps project bright, uniform light onto the work area and reduce power consumption. The special positioning of the ballasts over the light elements ensures light output over the entire length of the luminaire. Disturbing dark zones are avoided. High-quality aluminiumised parabolic louvres afford protection from annoying direct glare.

Complete product range with technical data beginning on page 128

## COMBINED USER-FRIENDLY LIGHTING.

### Matched to perfection

The increasing miniaturisation of components inevitably imposes higher requirements on illuminance levels and other quality characteristics such as modelling and luminance distribution. Higher illuminance levels and preferred light directions can be attained by means of additional luminaires fixed in position on the left and/or right cross-arm. Both of these factors are advantageous when carrying out soldering work and positioning small parts, as three-dimensional elements are subject to pronounced light-shadow contrast. The enhanced 3D vision facilitates the work process.

*The aluminiumised parabolic louvre in the luminaire head optimises directional control of the light. This ensures bright, uniform illumination of the work area. No glare.*

*The SAMKC 136 system tasklights are mounted on the vertical side-members of the profile frame. This results in bright, reflection-free illumination with minimal shadow effects. The light emission angles and mounting heights of the luminaires are individually adjustable (mountings not included). Aluminiumised parabolic louvre to eliminate direct glare.*

*The various Waldmann system tasklight models can be used on their own or in combination, according to the visual task concerned.*

## HIGHLIGHTS

- Modular luminaire design.
- Absolutely glare-free.\*
- Wide range of luminaires.
- Light output across the entire width of the luminaire.
- Also available with dimmer switch for stepless adjustment of light intensity.

\* In accordance with national and international occupational safety regulations (EN 1837).

## PRECISION DOWN TO THE MINUTEST DETAIL.

Focusing on the essentials

Magnifier luminaires occupy a special place in the sphere of tasklights. Magnifier luminaires are indispensable practical aids in the handicrafts sector and industry, in manufacturing and at laboratories. The ongoing miniaturisation of many work processes calls for enhanced visual performance which only the combination of light and magnifier is able to provide in a satisfactory man-

ner. The quality of magnifier luminaires is defined by the use of the appropriate light elements, the special luminaire design with typical functional features and the type, quality and characteristics of the magnifier itself. These aspects do not represent standardised components, but require to be adapted to the precise requirements of the application concerned.

Complete product range  
with technical data beginning  
on page 132

## POWERFUL. VARIABLE. DISTORTION-FREE.

### Exchangeable magnifiers · T16 lamp

State-of-the-art lamp technology is a key feature of the LRE 122 magnifier luminaire. The T16 circular fluorescent lamp offers 50% greater illuminance than conventional lamps. Another ground-breaking innovation is the possibility of varying the magnification factor. The magnification can be adapted to the given visual requirements in

fast and user-friendly fashion. The magnifier is simply replaced together with its frame by means of a clip lock. The LRE 122 also impresses in terms of magnifier quality, employing aspherical, distortion-free plastic lenses. The new "cera-tec®" hard coating from "Eschenbach Optik" produces a surface quality similar to glass and makes

Precise vision for intricate work: Distortion-free magnifiers and powerful light.

## HIGHLIGHTS

- Markedly improved illuminance due to T16 lamp technology.
- Magnifier glass exchangeable without tools.
- Distortion-free representation.
- cera-tec®, the new surface coating, protects the magnifier from mechanical stress
- Magnifier cover fixed to the luminaire, detachable or adjustable as anti-glare cover.
- Easy to position without annoying reverberations.

The magnifier glass is exchanged together with the frame - a swift and simple procedure.

Plastic magnifiers are available in 3.5 and 6 diopter variants. The 4 diopter glass magnifier is optionally available with a supplementary lens.

The luminaire can only be switched off when the cover is closed.

## WITH TWO LIGHT CHARACTERISTICS.

With shadow and shadow-free

Certain visual tasks call for shadow-free light from all sides. Other types of visual inspection work, involving three-dimensional objects, for example, require an asymmetric lighting angle with pronounced shadow formation. To date, different magnifier luminaires have had to be used according to the given

requirements. The SNL 319 magnifier luminaire enables the basic light characteristic to be changed by switching between the installed lamps. This means that all types of inspection work can be carried out with one luminaire only. Both the magnifier itself and the entire luminaire are fully flexible and individually adjustable.

*Adjusting the luminaire is simplicity itself. The light is always positioned precisely as required.*

## HIGHLIGHTS

- User can switch between two light modes.
- Separately pivoting magnifier.
- Powerful lighting.
- State-of-the-art energy-saving lamps.
- Simplicity itself to adjust, with no annoying reverberations.
- Head with 3D ball joint.
- Spring-balanced joints.

*Clearly visible: Large-area light with minimal shadow formation.*

*Light with pronounced shadow formation, particularly for three-dimensional objects.*

*Functional and visual high technology for professional applications.*

# THE FACTS ON MAGNIFICATION?

## Terms used in connection with magnification:

The definitions of commonly employed terminology below are intended to help you understand what magnification means.

### Magnification factor

(also referred to as the **magnification effect**): The degree by which the observed object is enlarged. The magnification factor is stated as a numerical value followed by an x (e.g. 4x).

### Diopter:

This term describes the refractive power of a lens. The diopter also establishes a relationship between magnification factor and focal length (see table below for relationship between diopter and magnification factor).

### Focal length:

This is the distance between the centre of the magnifier and the observed object at which **no distortion** occurs.

### Basic rule:

The focal length and the size of the lens decrease as the magnification factor increases.

### Useful tip:

In order to obtain the maximum distortion-free magnification factor, you should keep the magnifier at a distance of around 25 cm from your eyes.

### "System magnification":

The most commonly employed measure of magnification is the so-called system magnification. In addition to the magnification effect of the lens, this formula also takes the observer's visual acuity into consideration. A mean reference visual range is included in the formula to take account of the individual using the lens/magnifier.

As we state the magnification effect in diopters (dpt), it is useful to understand the relationship between diopters and magnification factor (x). The following simple formula can be used for calculation purposes.

$$\text{Magnification factor (x)} = \frac{\text{Diopters of lens}}{4} + 1$$

or, more simply,

$$x = \frac{D}{4} + 1$$

When calculating the system magnification of the 3 diopter lens in the FGL 118 luminaire, this formula applies as follows:

$$x = \frac{3 \text{ diopters}}{4} + 1 = 1.75x$$

## Examples of magnification factors

1x no magnification

1.75x or 175% of the original size, observed through a 3 diopter lens

2x or 200% of the original size, observed through a 4 diopter lens

2.75x or 275% of the original size, observed through a 7 diopter lens

3x or 300% of the original size, observed through an 8 diopter lens

4x or 400% of the original size, observed through a 12 diopter lens

5x or 500% of the original size, observed through a 16 diopter lens

## SNL 319, FGL 118

190-080-019

## Supplementary magnifiers

5	16	2.5	63

## UNIVERSAL APPLICATIONS.

### High luminous power

Certain areas of work call for special luminaires or specially equipped luminaires. Mobile luminaires are required when the workplace is continually on the move, e.g. in repair work. The space restrictions which frequently apply are another factor. Inside machines or on industrial plants, the actual working area is so limited that little space is available for the lighting. At the same time, these "ambient factors" also

impose particularly high requirements on the lighting. When particularly difficult working conditions apply, the effects of inadequate lighting are doubly negative. Luminous power, glare protection and ergonomic design are thus of fundamental importance along with the energy consumption data when it comes to ensuring the right lighting at special workplaces.

Complete product range  
with technical data beginning  
on page 140

## FOR WORK IN RESTRICTED CONDITIONS.

In protection systems IP 20, IP 65 and IP 67

Assembly, inspection or repair work in restricted conditions calls for special luminaires with high luminous power and professional features. Waldmann hand held luminaires have been developed specifically for such applications, and have been in successful use for decades in countless branches of industry and areas of use. The luminaires belonging to this programme differ in terms of design, fitted lamps and dimensions. The variety of models ensures that a professional lighting solution is always available, even when the most difficult conditions apply.

*Plenty of light despite minimal dimensions and the very lowest energy consumption. The HLWC series of hand luminaires.*

## HIGHLIGHTS

- Powerful lighting.
- Integrated reflectors to protect against glare.
- Modular design.
- Protection systems IP 20, IP 65, IP 67.

*The HLWC series of hand luminaires in protection system IP 20 or IP 54. Integrated reflector to protect against glare. Available in 7, 9 or 11 W variants.*

*HLE 108 hand luminaire. Jet-proof and dust-proof in accordance with protection system IP 20 or IP 65. Light (under 500 g) and handy. With integrated electronic ballast in the handle.*

## PERFECT PROTECTION.

For sensitive electronic modules

The abrupt discharge of built-up electric potential poses a danger not only in the form of lightning. Electrostatic discharges also occur on a daily basis at countless industrial workplaces. This can damage or even destroy electronic components, assemblies or complete electronic products.

Depending on the ambient conditions, extremely high static charges (volts) can build up.

In order for an ESD\* incident to occur, three processes must take place. Firstly, a static charge must be generated (friction, air flow). Then the properties of the object concerned must support the accumulation of the charge. Finally, the charge must be transmitted at high velocity from one object to another. While impulse discharges only become noticeable to humans at a level of 3000 V or above, a level of 100 V may be sufficient to damage an integrated circuit.

\* ESD = Electrostatic discharge  
EPA = Electrostatic protected area

## NO DAMAGE FROM ELECTROSTATIC DISCHARGES.

### Professional lighting solutions

Waldmann ESD luminaires are designed and produced such as to prevent static charging and to guarantee that built-up electrical potential is discharged in a controlled manner. Plastics represent a major source of danger. They are

insulators and are unable to perform electrical discharge. Special plastics are necessary in order to achieve the necessary discharge capacity. Luminaires with metallic fittings and surfaces are not advisable. Although the

electric potential is discharged directly, the likelihood of a harmful spark discharge is very high on account of the extremely high discharge velocity.

Model STE 136A is an universal luminaire which projects glare-free light onto the work area.

Model SNL 319A. The magnifier can be positioned independently of the light source. The magnifier glass is also able to discharge electric potential, thanks to a special coating.

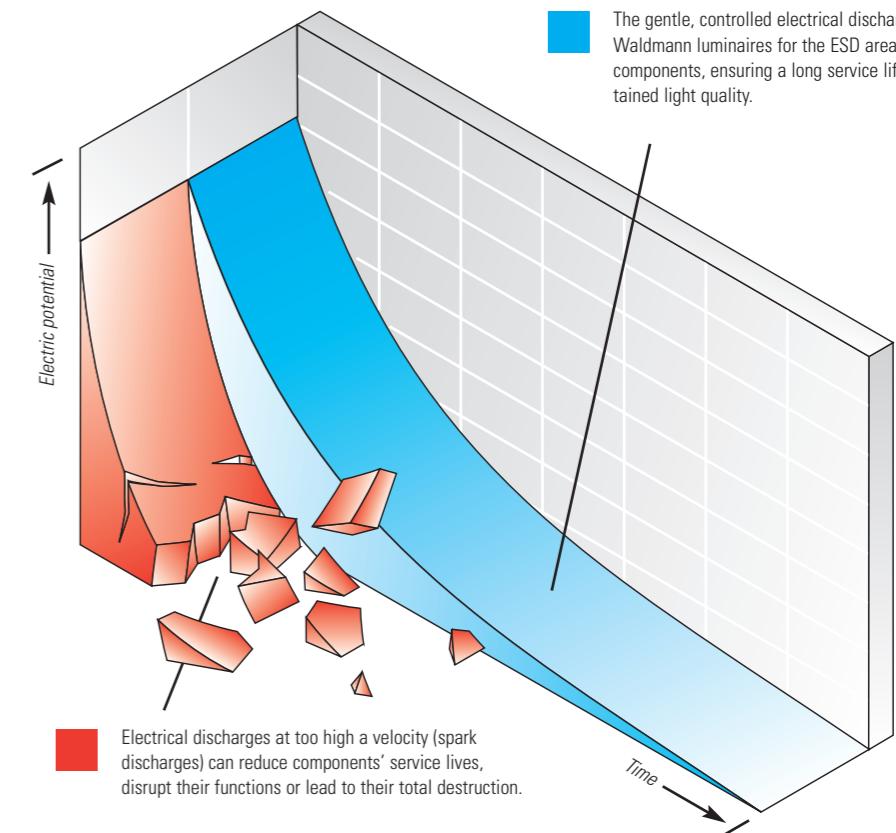

The SAMZCE 236A ESD luminaire for system workstations. Glare-free light and bright, uniform illumination of the work area.

## HIGHLIGHTS

- Safe. No damage from electrostatic discharges.
- Special anti-static coating.
- Optimum illumination by means of energy-saving lamps.
- Absolutely glare-free.\*
- High-quality joints. Very simple to adjust.

\* In accordance with national and international occupational safety regulations (EN 1837).

## DETAILED INSPECTION.

The right light is crucial

Beyond the basic lighting functions, special applications also require the use of standardised inspection light. A case in point is the control board on modern large-format printing presses. The primary considerations here are speed and print quality in terms of colour density in print runs as defined in colour proofs.

In addition to the obligatory densitometric measurements, ongoing visual examinations remain indispensable. The same applies to the register, which is also an elementary criterion for print quality. The right light at a printing press must illuminate the examining and colour-matching station in daylight quality.

Complete product range  
with technical data beginning  
on page 144

## QUALITY ASSURANCE WITH THE RIGHT INSPECTION LIGHT.

### Professional lighting solutions

In addition to their deployment at printing works, graphic studios, reprographic works, photographic studios, advertising agencies and in other areas relating to the print industry, inspection luminaires are also indispensable in many other industries besides. These include diverse applications in the textile industry as well as use at technical and medical laboratories,

medical practices and hospitals. Waldmann vertical illuminators, light panels and colour testing cubicles are employed whenever colours, surfaces or material quality require visual examination. The FAK colour testing cubicle is equipped with four standardised light sources for this purpose. This facilitates the detection of undesired metamerism effects.

Complete product range  
with technical data beginning  
on page 146

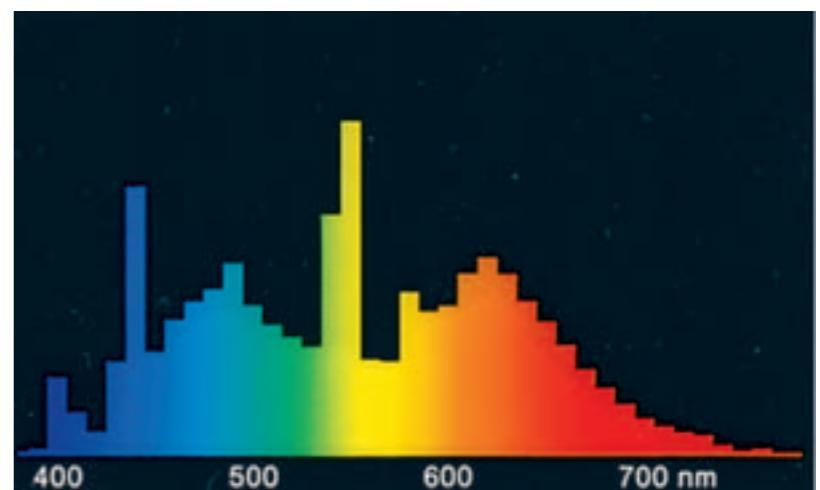

*Waldmann vertical illuminator ALE 458 for bright, particularly large-area illumination. As the lamps require replacement after approx. 2,000 operating hours on account of spectral shifts, a timer is incorporated in the painted sheet steel housing.*

*Waldmann LPE 208. Reliable colour verification from the initial draft to final production with professional light panels in A4 formats.*

*Waldmann colour testing cubicle FAK 40. Five different light qualities for the visual assessment of colours and surfaces.*

## TECHNICAL DATA.

Interactive: [www.waldmann.com](http://www.waldmann.com)

The following pages outline Waldmann's complete lighting programme for industrial applications, presenting a photograph of each model together with the appurtenant technical data.

Further product information is available in addition to this catalogue.\* A catalogue can be ordered for lighting in offices and administrative buildings, for example.

Special brochures are available for areas including architecture, dental and medical practices. A whole range of special publications on the most diverse topics relating to lighting is also available. Particularly recommendable is the technical book "*Light at the industrial workplace*", published by "Verlag Moderne Industrie". Readers will find all the information they need on this subject in this comprehensi-

ve work covering all aspects from fundamentals of lighting through to pragmatic lighting solutions and detailed descriptions of different types of luminaire. Waldmann's interactive homepage at [www.waldmann.com](http://www.waldmann.com) offers news on the very latest developments, with the full scope of product information and diverse sections dedicated to special topics.

\* A corresponding fax order form is to be found on page 157.
